I am currently a 4th year Ph.D. candidate in the Computer Science Department at Northwestern University, advised by Prof. Yan Chen. I have a broad interest in various aspects of cloud networks and network protocols. My current research focuses on network optimization of microservices/serverless based cloud. I am also working for introducing formal methods into network protocol verification.

 - Passively collected radio traffics, including Wi-Fi and Bluetooth, analyzed by deep learning

Research: Cloud Networks & SDN

- **Network Optimizing for Microservices/Serverless Cloud** (work in progress) 2020 – Present
 - Microservices/serverless architectures bring flexibility but introduce network communication delay
 - Designed systematic metrics to provide a benchmark for the microservices network performance
 - Integrated QUIC into **OpenFaaS/Kubernetes** to improve serverless network performance

- **Generic Security Policy Enforcement System for SDN-based Cloud** 2017 – 2018
 - Designed a **policy language** for resource protection and management of SDN-based Cloud
 - Implemented in the **OpenDaylight** controller, and deployed on **OpenStack**

Publication: [IWQoS'18] Lightweight Resource Protection and Management System for SDN-based Cloud
- **Routing Policy for Solving Reactive Model Overhead of Software Defined Networks** 2016 – 2017
 - Proposed a routing policy to reduce the control channel bandwidth consumption up to 80%
 - Implemented in the **Floodlight** controller under the **OpenFlow** protocol with **Open vSwitch**
 - Deployed on the ONetSwitch, an OpenFlow white-box switch with Xilinx FPGA

Publication: [ICNP'17] SoftRing: Taming the Reactive Model for Software Defined Networks

Research: Formal Methods for Network Protocols

- **Formal Verification and Vulnerability Detection of LTE/5G Protocols** 2019 - 2020
 - Used **TLA+** to formally specify the emergency call systems in **4G/5G** cellular network protocols
 - Built a **complete cellular network testbed** (USRP, OpenAirInterface) for real-world verification
 - Discovered serious availability and security issues in real-world, **acknowledged by major carriers**

Publication: [Under Review] Discovering Emergency Call Pitfalls for Cellular Networks with Formal Methods
- **Formal Secure Configuration Search for Network Protocols** (work in progress) 2020 - Present
 - Traditionally, researchers use secure properties to verify a protocol is safe or find counterexamples
 - We convert this decision problem into a search problem. Given the model and the properties, we aim to search the boundaries of the configuration space where the system is always secure and reliable
 - We employ inductive generalization and improved IC3 algorithm to determine the space

Publication: [Sigcomm'20 Poster] Network Protocol Safe Configuration Search in One Shot
