Research: Cloud Networks & SDN

- **Network Optimizing for Serverless Cloud** (work in progress)   2020 – Present
    - Microservices/Serverless architectures bring flexibility but introduce network communication delay
    - Seamlessly integrated **QUIC** into **OpenFaaS/K8s**, improved cloud network performance by 28%
    - Designed systematic benchmarks for the microservices network performance measurement

- **Generic Security Policy Enforcement System for SDN-based Cloud**   2017 – 2018
    - Designed a **policy language** for resource protection and management of SDN-based Cloud
    - Implemented in the **OpenDaylight** controller, and deployed on **OpenStack**

- **Routing Policy for Solving Reactive Model Overhead of SDN**   2016 – 2017
    - SDN control channel bandwidth is the major bottleneck of applying reactive forwarding
    - Proposed a routing policy to reduce the SDN control channel bandwidth consumption up to 80%
    - Implemented in the **Floodlight** controller under **OpenFlow/P4** switch and **Open vSwitch**

Research: Formal Methods for Network Protocols

- **Formal Verification and Vulnerability Detection of LTE/5G Protocols**   2019 - 2020
    - Used **TLA+** to formally specify the emergency call systems in **4G/5G** cellular network protocols
    - Built a **complete cellular network testbed** (USRP, OpenAirInterface) for real-world verification
    - Discovered serious availability and security issues in real world, **acknowledged by major carriers**

- **Formal Secure Configuration Search for Network Protocols**   2020 - 2021
    - Traditionally, researchers use secure properties to verify a protocol is safe or find counterexamples
    - We convert this decision problem into a search problem. Given the model and the properties, we
      search the boundaries of the configuration space where the system is always secure and reliable
